Tip: Start by filling in the names that have a unique number of letters. E.g. "JAKE" is the only name with 4 letters, so there is only one place it can go on the grid.

Can you fit the names of the 20 characters from *The Conjuror's Cookbook* series into the grid? There is only one way to make them all fit, so make sure another name does not fit in the same space before you write it in. All the names should be written top to bottom or left to right.
